- * The mission of OSI can best be accomplished by fully trained analysts capable of evaluating current and prospective foreign scientific developments. Since the great majority of analysts employed by this Office are already basically qualified for scientific evaluation, the need for undergraduate knowledge is minimized.

The need for intensive training in particular subjects on a graduate level is constant and must, therefore, be considered in a budget estimate. It is felt that the best possible way to approach the problem from the budget viewpoint is to estimate (a) the number of individuals who will be engaged in part-time scientific studies during FY 54 and FY 55, and (b) the OSI personnel who would be requesting training on a full-time basis during the above stated fiscal years.
